

MIDDLEWARE

for artificial and emotional intelligence

It is our goal to take behavior in online, video and pc games to the next level, making them intelligent and emotional entertainment. With our inimitable one-stop middleware **EKI One®** we make game developers' worlds livelier and awaken whole galaxies.

Bringing bytes alive – this is our vision:
Artificial Technology.

One for all and all in one – **EKI One®** –
the complete behavior development kit.

Our Expertise

EKI One® is the cutting-edge one-stop solution for artificial and emotional intelligence especially for online, computer and video games. The solution is a complete design and runtime environment for artificial and emotional intelligence.

Product-Line:

All products include a complete workflow and runtime integration to Unity game engine. We offer further SDKs (WinX, Linux ...) and clients (.NET, Java, C++) on request.

EKI One® Indie is the one-stop solution for behavior in computer and video games. EKI One® Indie is a complete design and runtime environment for behavior. The product covers all aspects of the creation, realization and simulation of behavior. EKI One® Indie is a special version of EKI One® with a very attractive pricing for indie developers, academic institutions and researchers who have no need for a server-sided behavior simulation.

EKI One® is the ultimate MMOG extension of EKI One® Indie with the EKI One® Server and an enhanced support package. EKI One® Server has been especially designed for a scalable behavior simulation in a server environment and is shipped with a C#.NET client. This is typically needed for MMOs, other online games and research activities.

Unlock the potential of the next generation of online games and be able to »Bring your bytes alive«.
